INSTALLING

THE TWO BASIC SUB FLOOR INSTALLATION ENVIRONMENTS MUST HAVE SMOOTH, CLEAN, DRY, FLAT AND SOUND SURFACES

WOOD SUB FLOOR

- Remove protrusions such as nails and screws
- Remove surface debris and vacuum

CONCRETE SUB FLOOR

- Fill voids with portland based cement products
- Remove surface debris and vacuum
- Ensure that vapor retarder is installed
- Concrete should be completely cured

IF ASU-15 IS ABOVE A CRAWL SPACE MAKE SURE THAT THE CRAWL SPACE HAS A PROPERLY INSTALLED VAPOR RETARDER. ALSO ENSURE THAT THE CRAWL SPACE IS VENTILATED TO LOCAL CODE STANDARDS.

OTHER CONSIDERATIONS

The installer is responsible to see that all local codes and flooring manufacturers requirements are met. For additional detailed information go to the NWFA (National Wood Flooring Association) Web site www.nwfa.org.
